# **MOVING SPECIES**

# **OBJECTIVE**

Identify and move species to sites that are likely to provide future habitat.

#### DESCRIPTION

Maintaining ecosystem function or making the transition to a better-adapted system may involve the active introduction of non-native species or genotypes. Given the uncertainty about specific climate conditions in the future, the likelihood of success may be increased by relocating species with a broad range of tolerances (e.g., temperature, moisture) across a wide range of provenances.

## **EXPECTED RESULTS**

Species adapted to specific climatic and site conditions.

# **RESULT INDICATORS**

Number of moved species

# **INVOLVED ACTORS**

Natural manager, scientist, ecologist.

### **EXPECTED TIMELINE FOR ACTION**

- Medium term (5-10 years)
- Long term (> 10 years)

#### **BEST PRACTICES**

- Australia and USA
- Czech Republic

#### **CRITICALITIES**

Uncertainties inherent in climate change, the sparse record of previous examples, and continued uncertainties about ecosystem response.

#### **SCOPE OF THE ACTION**

• Adaptation

# **TYPE OF PROPOSED ACTIONS**

• Green

# **SECTOR OF ACTION**

- Agriculture / Forests / Land use
- Aquaculture / Fishing
- Biodiversity / Conservation of ecosystems
- Tourism and leisure
- Water resource management
- Other

# **CLIMATE IMPACTS**

- Change or loss of biodiversity
- Drought
- Extreme precipitation
- Extreme temperatures
- Fires
- Floods
- Salinization and acidification of water
- Strong winds
- Other

#### **IMPLEMENTATION SCALE**

• Region / Country
