

DEFINITION OF WATER PLANS

OBJECTIVE

Effective environmental protection and use of resources.

DESCRIPTION

The law provides for the promotion of studies and the development of evaluation models and it establishes guidelines for the design of land management plans. It deals with all aspects relating to the hydraulic dynamics of the territory for the definition of the plan objectives and for the subsequent implementation, up to the planning of transformations of the territory such as modifying the existing hydraulic regimes according to the "Guidelines". The directives also require that the provisions of the superordinate sector planning should be adopted by integrating them into the Regional Coastal Plan.

EXPECTED RESULTS

Hydraulic structure of the territory assessed.

RESULT INDICATORS

Implementation of the water plan for the municipality.

INVOLVED ACTORS

Local administrations, technical experts.

EXPECTED TIMELINE FOR ACTION

- Short term (1-4 years)

BEST PRACTICES

- Veneto Region – Italy

CRITICALITIES

Landscape, archaeological, monumental constraints.

SCOPE OF THE ACTION

- Adaptation

TYPE OF PROPOSED ACTIONS

- Soft

SECTOR OF ACTION

- Water resource management

CLIMATE IMPACTS

- Other

IMPLEMENTATION SCALE

- Municipality
